We realize that this is a stressful time for you and your partner. We are here to help. We will do our very best to help you achieve pregnancy. We will try to answer all your questions.

Your evaluation begins with an office visit with one of our physicians. The visit may consist of a physical exam along with a detailed history. Please answer all questions openly and honestly. We are here to help.

A semen analysis may be necessary to rule out any contributing male factor problems. If there is an abnormality, your partner may be referred to a urologist for further evaluation. (See order form for Physicians Laboratory)

We will want to do hormone testing. Many different hormones must interact correctly to ensure proper ovulation. The following pages will give you a brief explanation of the most common blood tests and procedures that are used in our practice. We will order tests, procedures and medications that are most appropriate for you.

We have created a specific phone line for infertility calls. We realize that this is time sensitive. We will return your call throughout the day as we are able. You will be required to leave a message. The number to call is 402-697-7200 option # 5. If your period starts over the weekend please call Monday morning.
